6.1 Request validation error codes.....	12
6.2 HTTP Status codes.....	12

## 1. Purpose

To provide the API end point information and examples of the web services available for LWIN7 Request API.

## 2. Glossary of Terms

Term	Meaning
<b>LWIN</b>	<p>LWIN - the Liv-ex Wine Identification Number – serves as a universal wine identifier for the wine trade. LWIN is a unique seven to eighteen-digit numerical code that can be used to quickly and accurately identify a product. LWIN allows wine companies to keep their preferred naming system, while introducing a new universal code.</p> <p>This document refers to LWIN7 (7-digit, wine) and LWIN11 (11-digit, wine + vintage) codes only.</p>
<b>Combine</b>	<p>When two LWINs for the same wine have been erroneously created codes are "combined". This preserves the overall data of the product. The dominant LWIN is known as the "leader", whils the LWIN that has been merged away is know as the "follower".</p>

## 3. Technical Standards

- Permitted users will be issued with a unique token (CLIENT\_KEY) and password (CLIENT\_SECRET) combination to control the access for all the web services covered under Exchange Integration.
- The web services will consume and produce both XML and JSON. The user can provide the content type in the request header. If the user does not provide any information, then the default content type will be JSON.
- The project will support ISO 8601.
- The project will only support HTTPS protocol for client and server communications.
- The API will support the following methods:
  - POST for create operation
- Pretty printing for output readability only is supported if required
- Compression for bandwidth savings are used
- Authentication mechanism will be custom based on CLIENT\_KEY and CLIENT\_SECRET
- The APIs will be accessible at <https://api.liv-ex.com/> followed by their specific base URIs

## 4. Request Header

This information will be used to authenticate valid access to the REST API. Each user will have to provide the following information in the request header.

### Param

Name	Mandatory	Description
CLIENT_KEY	Y	A valid merchant GUID which will be unique for each user.
CLIENT_SECRET	Y	Password/Secret for the user CLIENT_KEY.

ACCEPT	Y	Accept header is a way for a client to specify the media type of the response content it is expecting. The values for the content type will be application/json or application/xml.  If no/ invalid content type is found in the request, then JSON format will be used by default.
CONTENT-TYPE	Y for POST requests	Content-type is a way to specify the media type of request being sent from the client to the server. The values for the content type will be application/json or application/xml.  If no/ invalid content type is found in the request, then JSON format will be used by default.

e.g.

CLIENT\_KEY: 94B5CC70-BC3D-49C3-B636-C3C7552E543D

CLIENT\_SECRET: merchantpasswd

ACCEPT: application/json

CONTENT-TYPE: application/json

#### Invalid header JSON response

```
{
  "status": "Unauthorized",
  "statusCode": "401",
  "message": "Request was unsuccessful",
  "livexCode": "R000"
  "apiInfo": {
    "version": "1.0",
    "timestamp": 1518524979121,
    "provider": "Liv-ex"
  }
}
```

#### Invalid header XML response

```
<Response>
  <Status>Unauthorized</Status>
  <HttpCode>401</Code>
  <Message>Request was unsuccessful.</Message>
  <LivexCode>R001</LivexCode>
  <ApiInfo>
    <Version>1.0</Version>
    <Timestamp>2019-11-04T11:12:30</Timestamp>
    <Provider>Liv-ex</Provider>
  </ApiInfo>
</Response>
```

## 5. API Listing

### 5.1 LWIN7 Request service (POST method)

#### Description

This service allows to submit request for a new LWIN7. One new LWIN7 code can be requested per one API call.

**Base URI**

</lwin/request/v1/lwin7Request>

**Request Parameters**

Name	Mandatory	Description										
producerTitle	N	Title of producer or owner of wine <b>Type:</b> alphanumeric										
producerName	Y	Producer or owner of wine. If there is no producerName, use NA <b>Type:</b> alphanumeric										
wine	Y	Name of wine (brand and/or grape and/or technical term) If there is no wine name, use NA <b>Type:</b> alphanumeric										
country	N	Country of origin <b>Type:</b> alphanumeric										
region	N	Region of origin (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
subRegion	N	Sub-region of origin (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
site	N	Site within sub-region (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
parcel	N	Parcel within site (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
colour	Y	Colour of LWIN product <b>Type:</b> alphanumeric <b>Values:</b> "white", "red", "rose", "na"										
type	Y	LWIN beverage type <b>Type:</b> alphanumeric <b>Values:</b> "wine", "fortified", "spirit", "beer", "other"										
subType	N	Subcategory of LWIN type <b>Type:</b> alphanumeric <b>Values:</b> <table border="1" data-bbox="873 1495 1404 1665"> <tbody> <tr> <td>wine</td> <td>"still", "sparkling"</td> </tr> <tr> <td>fortified</td> <td>"madeira", "port", "sherry"</td> </tr> <tr> <td>spirit</td> <td>"brandy", "whiskies", "vodka"</td> </tr> <tr> <td>beer</td> <td>"na"</td> </tr> <tr> <td>other</td> <td>"na", "sake"</td> </tr> </tbody> </table>	wine	"still", "sparkling"	fortified	"madeira", "port", "sherry"	spirit	"brandy", "whiskies", "vodka"	beer	"na"	other	"na", "sake"
wine	"still", "sparkling"											
fortified	"madeira", "port", "sherry"											
spirit	"brandy", "whiskies", "vodka"											
beer	"na"											
other	"na", "sake"											
designation	N	Officially assigned status (specific to local laws) <b>Type:</b> alphanumeric										
classification	N	Officially declared quality level (where applicable, specific to local laws) <b>Type:</b> alphanumeric										

vintageConfiguration	N	Vintage pattern of the wine (e.g. single vintage only, production ended) <b>Type:</b> alphanumeric <b>Values:</b> "sequential", "nonSequential", "singleVintageOnly"
vintageValues	Y	Vintages when the wine was produced. At least 1 vintage must be provided irrespective of vintageConfiguration <b>Type:</b> array, integer(4)
firstVintage	N	The first vintage of the LWIN7 <b>Type:</b> integer(4)
finalVintage	N	The final vintage of the LWIN7 (only if production ended) <b>Type:</b> integer(4)
url	N	<b>Type:</b> alphanumeric Max 2000 characters
note	N	<b>Type:</b> alphanumeric Max 250 characters

### Sample Request Body

#### JSON

```
{
  "producerTitle": "",
  "producerName": "Wiston",
  "wine": "Blanc de Blancs",

<note/>
</lwin7Request>

```

### Sample Response Body

The LWIN7 Request POST service returns newly submitted LWIN7 request with requestReference, all recorded metadata and requestStatus.

### Response parameters

Name	Description										
producerTitle	Title of producer or owner of wine <b>Type:</b> alphanumeric										
producerName	Producer or owner of wine <b>Type:</b> alphanumeric										
wine	Name of wine (brand and/or grape and/or technical term) <b>Type:</b> alphanumeric										
country	Country of origin <b>Type:</b> alphanumeric										
region	Region of origin (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
subRegion	Sub-region of origin (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
site	Site within sub-region (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
parcel	Parcel within site (where applicable, specific to local laws) <b>Type:</b> alphanumeric										
colour	Colour of LWIN product <b>Type:</b> alphanumeric <b>Values:</b> "white", "red", "rose", "na"										
type	LWIN beverage type <b>Type:</b> alphanumeric <b>Values:</b> "wine", "fortified", "spirit", "rice wine", "beer", "other"										
subType	Subcategory of LWIN type <b>Type:</b> alphanumeric <b>Values:</b> <table border="1" data-bbox="776 1600 1308 1768"> <tbody> <tr> <td>wine</td> <td>"still", "sparkling"</td> </tr> <tr> <td>fortified</td> <td>"madeira", "port", "sherry"</td> </tr> <tr> <td>spirit</td> <td>"brandy", "whiskies", "vodka"</td> </tr> <tr> <td>beer</td> <td>"na"</td> </tr> <tr> <td>other</td> <td>"na"</td> </tr> </tbody> </table>	wine	"still", "sparkling"	fortified	"madeira", "port", "sherry"	spirit	"brandy", "whiskies", "vodka"	beer	"na"	other	"na"
wine	"still", "sparkling"										
fortified	"madeira", "port", "sherry"										
spirit	"brandy", "whiskies", "vodka"										
beer	"na"										
other	"na"										
designation	Officially assigned status (specific to local laws) <b>Type:</b> alphanumeric										
classification	Officially declared quality level (where applicable, specific to local laws)										

	<b>Type:</b> alphanumeric
vintageConfiguration	Vintage pattern of the wine (e.g. single vintage only, production ended) <b>Type:</b> alphanumeric <b>Values:</b> "sequential", "nonSequential", "singleVintageOnly".
vintageValues	Sorting order: youngest vintage → oldest vintage <b>Type:</b> array, integer(4)
firstVintage	The first vintage of the LWIN7 <b>Type:</b> integer(4)
finalVintage	The final vintage of the LWIN7 (only if production ended) <b>Type:</b> integer(4)
url	<b>Type:</b> alphanumeric Max 2000 characters
note	<b>Type:</b> alphanumeric Max 250 characters
requestStatus	<b>Type:</b> alphanumeric <b>Values:</b> "pending"
requestReference	<b>Type:</b> integer(11)

## JSON Response

The response is sent per request.

```

## 6. Response Codes

This section describes the response codes that will be returned by the LWIN services.

Code	Message
R000	Request was unsuccessful
R001	Request completed successfully
R002	Request partially completed

### 6.1 Request validation error codes

Code	Message
L001	("Mandatory field [%s] missing.")

### 6.2 HTTP Status codes

HTTP defines a bunch of meaningful status codes that can be returned from our API. These can be leveraged to help our API Merchants/consumers route their responses accordingly:

Code	Message
200 OK	Response to a successful GET, POST, PUT, DELETE. Can also be used for a POST that doesn't result in a creation.
201 Created	Response to a POST that results in a creation.
202 Accepted	The request has been accepted and will be processed later. It is a classic answer to asynchronous calls (for better UX or performances).
204 No Content	Response to a successful request that won't be returning a body (like a DELETE request)
400 Bad Request	The request is malformed, such as if the body does not parse
401 Unauthorized	When no and/or invalid authentication details are provided. Can also be used to trigger an auth popup if API is used from a browser
403 Forbidden	When authentication succeeded but authenticated user doesn't have access to the resource
404 Not Found	When a non-existent resource is requested
405 Method Not Allowed	When an HTTP method is being requested that isn't allowed for the authenticated user
406 Not Acceptable	Nothing matches the Accept-* Header of the request. As an example, you ask for an XML formatted resource, but it is only available as JSON.

409 Conflict	Indicates one or more supplied parameters are triggering a validation error. A relevant TR code should be returned in the response.
410 Gone	Indicates that the resource at this end point is no longer available. Useful as a blanket response for old API versions
415 Unsupported Media Type	If incorrect content type was provided as part of the request
422 Unprocessable Entity	Used for validation errors. Should be used if the server cannot process the entity, e.g. if an image cannot be formatted or mandatory fields are missing in the payload.
429 Too Many Requests	When a request is rejected due to rate limiting
500 Internal Server Error	The general catch-all error when the server-side throws an exception. The request may be correct, but an execution problem has been encountered at our end.
